PC(S1)-73

Issued May 1974

## SUPPLEMENTARY REPORT

### Low-Income Neighborhoods in Large Cities: 1970

Columbus, Ohio

This report is one of 39 within the PC(S1) series of 1970 census reports that summarize information on the population and housing characteristics of low-income neighborhoods in the Nation's 50 largest cities.<sup>1</sup> Low-income neighborhoods are subdivisions of low-income areas, which for this report include all census tracts in which 20 percent or more of all persons were below the poverty level in 1969. (See "Definitions.") These low-income neighborhoods generally consist of contiguous census tracts with a combined population of 20,000 or more. The neighborhood boundaries are based on current socioeconomic data and the recommendations of local agencies.

Information is presented here on each of the low-income neighborhoods within the city. The statistics shown in the detailed tables are part of a special tabulation of 1970 census data prepared for the Office of Economic Opportunity to determine the location of low-income areas and their neighborhood subdivisions, to analyze the characteristics of the residents of these neighborhoods, and to compare the residential characteristics of a low-income neighborhood to those of other low-income neighborhoods and those of areas outside such neighborhoods. For further information on this special tabulation, see "Related Materials." Financial support for the preparation of this set of 39 reports was provided by the Office of Assistant Secretary for Planning and Evaluation, Department of Health, Education, and Welfare. Similar data for the entire city, the entire low-income area (without neighborhood subdivisions), and the balance of the city outside the low-income area are published in **1970 Census of Population, Volume II, Subject Reports, Series PC(2)-9B, "Low-Income Areas in Large Cities."**

<sup>1</sup> Except Honolulu, for which no low-income neighborhoods were defined. See list of 39 reports on page ii.

This report was prepared by Donald G. Fowles, Poverty Statistics Program, Population Division.

For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402, and U.S. Department of Commerce District Offices. Price 65 cents

79	Indianapolis, Ind.	99	San Antonio, Tex.
80	Jacksonville and Tampa, Fla.	100	San Diego and San Jose, Calif.
81	Kansas City, Mo.	101	San Francisco and Oakland, Calif.
82	Los Angeles and Long Beach, Calif.	102	Seattle, Wash.
83	Louisville, Ky.	103	Washington, D.C.
84	Memphis and Nashville-Davidson, Tenn.		

About 142,000 persons resided in the low-income area of Columbus, Ohio, in 1970 (table A). These low-income area residents constituted 28 percent of the city's population. In the balance of the metropolitan area outside Columbus, only 2 percent of the population resided in such areas.

The low-income area of Columbus was subdivided into four neighborhoods which varied in size and racial composition. The population of the neighborhoods ranged from 21,000 to 46,000, and the proportion of the population which was Negro ranged from 9 percent to 85 percent. In the low-income area as a whole, Negroes constituted 39 percent of the population, as compared with 11 percent in the balance of the city.

There were 72,000 persons in Columbus who were below the poverty level in 1969. Of these, 62 percent lived in the low-income area. About 31 percent of the residents of the low-income area were below the poverty level, as compared with only 7 percent of

those living elsewhere in the city. Within the low-income area, this proportion ranged from 27 percent in neighborhood 3 to 36 percent in neighborhood 2.

Although a high proportion of the poor resided in the low-income area, half of the black population above the poverty level also lived in this area. About 78 percent of the city's poor blacks and 50 percent of the nonpoor blacks resided in the low-income area, as contrasted with 53 percent of the city's poor white population and 17 percent of nonpoor whites.

The population of the low-income area, as well as the balance of the city, contained the whole range of social, economic, and housing characteristics. However, there were generally sharp contrasts between the proportional distribution of the characteristics of the low-income area population and the population living outside this area. In addition, there was some variation in the characteristics of the individual neighborhoods within the low-income area.

Table A. Poverty Status in 1969 of Persons By Residence in Low-Income Neighborhoods and Race, for the Columbus, Ohio SMSA: 1970

(See accompanying maps and tract listings for location of low-income neighborhoods)

In low-income area.....	7,319	860	11.8	1,520	241	20.8	28.0
Percent in low-income area.....	2.0	15.2	(X)	6.7	29.6	(X)	(X)

(X) Not applicable.

<sup>1</sup>Includes several census tracts not included in the neighborhoods.

Families within the low-income area were more likely to be headed by females than families outside this area. Such families constituted 24 percent of all low-income area families, as compared with only 11 percent of families living elsewhere in the city (table B). Low-income area families headed by women were also more likely to have children in the home and, moreover, tended to have a larger number of children than families living outside the low-income area. Thus, a considerably higher proportion of children living in the low-income area (38 percent) were in families in which both parents were not present than were children living outside this area (14 percent). This proportion was as high as 53 percent in neighborhood 2.

The generally lower socioeconomic status of the low-income area population was reflected by such characteristics as education, employment, and occupation. For example, about 65 percent of persons 25 years old and over who resided in the low-income area had not completed their high school education, as compared with 37 percent outside this area.

Low-income area families were less likely to contain earners than those living outside this area, even when families headed by an aged person were excluded. Furthermore, working heads of families

were less likely to have worked year round if they lived in the low-income area. Unemployment rates were generally higher in this area than elsewhere, and those persons who were employed were more concentrated in the lower-paying occupations. Only 29 percent of employed males who lived in the low-income area were employed in white-collar occupations, as compared with 49 percent for males living outside this area. This proportion was as low as 23 percent in neighborhood 2. The same relationship was observed for females, although they were more likely to be employed in white-collar occupations (primarily as clerical and sales workers) than males.

The low-income neighborhoods of Columbus were clustered around the central business district and therefore contained a disproportionate share of older housing units, often vacant. The majority of the housing units in the low-income area were occupied by renters, and a higher proportion contained more than one person per room than units outside this area. Low-income area housing tended to be less expensive in terms of average rent but more expensive in terms of the proportion of a family's income required to cover this expense. About 52 percent of the low-income area households paid more than one-fourth of their income for rent, as compared with 36 percent for households outside this area.

Table B. Summary of Social, Economic, and Housing Characteristics of the Population By Residence in Low-Income Neighborhoods, for Columbus, Ohio: 1970

{ See accompanying maps and tract listings for location of low-income neighborhoods.

Area	Families		Persons						Housing units						
	With female head		Employed, 16 years old and over—percent worked 50 to 52 weeks			Males in civilian labor force, 16 to 64 years old—percent not high school graduate unemployed			Occupied—percent						
	Percent of all families	Percent with related children under 18 years old	Head worked in 1959—percent worked 50 to 52 weeks	Percent with no earners <sup>1</sup>	Male	Female	Related children under 18 years old—percent not living with both parents	Renter-occupied	Structure built 1939 or earlier	With 1 or more persons per room

Not in low-income area.....	10.7	62.4	2.08	77.9	2.1	49.0	72.2	3.1	36.7	14.0	3.8	38.4	36.1	5.3	36.1

<sup>1</sup> Excludes families with head 65 years old and over.

<sup>a</sup> Excludes one-family units, 10 years or more, all "no cash rent" units, and units for which the income of the family or individual was reported as "none" or "less than \$1,000."

## RELATED MATERIALS

### 1970 Census

There are three primary sources of 1970 census data on the characteristics of the population residing in low-income areas as defined in this report. The first source is the volume II report, PC(2)-9B, "Low-Income Areas in Large Cities," which presents data for low-income areas (without neighborhood subdivisions) in the Nation's 50 largest cities. The second source, consisting of this report and the other PC(S1) reports listed on page 2, presents data for neighborhood subdivisions of low-income areas in the same 50 cities. The third source, from which the data for these PC(S1) reports were extracted, consists of a special tabulation of 1970 census data prepared for the Office of Economic Opportunity (OEO). This tabulation covers each of the 97 standard metropolitan statistical areas (SMSA's) in which one or more of the central cities had at least one group of contiguous low-income area tracts with a population of 20,000 or more. For each of these 97 SMSA's, the OEO tabulation shows data for the entire SMSA, each component county, and each central city, including the neighborhood subdivisions of the central city low-income area.

In each of the three sources, comparable data are shown for all races, white, Negro, and persons of Spanish language. For SMSA's in California, data also are shown for the Japanese, Chinese, American Indian, and Filipino populations.

Copies of the entire OEO tabulation for each of the 97 SMSA's, including maps and census tract listings which identify the low-income areas and their neighborhood subdivisions, were sent to the appropriate Federal Regional Councils, State Economic Opportunity Offices, and local community action agencies. Copies of these materials can also be obtained by writing to the Chief, Industrial and Social Records Branch, National Archives, Washington, D.C. 20408. Requests for further information about this tabulation, as well as limited requests for copies, should be made in writing to the Chief, Population Division, Bureau of the Census, Washington, D.C. 20233.

Selected summary data for the 50 cities individually and seven tables of detailed data for the 50 cities combined were extracted from the PC(2)-9B report and published separately in **1970 Census of Population, Supplementary Report, Series PC(S1)-56, "Selected Characteristics of the Population in Low-Income Areas of Large Cities."**

Maps of these 50 cities showing the location of census tracts in low-income areas by poverty rate (but without neighborhood subdivisions) are available at cost of reproduction. Requests for these maps, specifying the cities desired, should be made in writing to the Chief, Population Division, Bureau of the Census, Washington, D.C. 20233.

Data for low-income areas as defined for the Census Employment Survey (CES) are available for 60 urban and 7 rural areas in **1970 Census of Population and Housing, Employment Profiles of Selected Low-Income Areas, Series PHC(3)**. The definition of low-income areas used for the CES differs from the definition used for this report. (See "Definitions.") Most of the data in the PHC(3) reports consist of detailed information not available from the 1970 census questionnaire on such subjects as employment, unemployment, training for work, job-seeking methods, job tenure, sources and level of income, residential mobility, transportation to work, and selected factors considered deterrents to employment.

Poverty statistics based on the 20-percent sample for the United States, regions, divisions, States, SMSA's, places with a population of 2,500 or more, and counties were published in chapter C of **1970 Census of Population, Volume I, Characteristics of the Population**. More detailed poverty data cross-classified by such variables as education, employment status, occupation, and income were published in chapter D of the volume I report for the United States, regions, States, SMSA's with a population of 250,000 or more, and central cities of these SMSA's. The statistics shown in each of the State parts of the volume I report are summarized for the United States in **Volume I, Part 1, "United States Summary."** Chapters C and D were originally published as separate paperbound reports in series PC(1)-C, "General Social and Economic Characteristics," and PC(1)-D, "Detailed Characteristics."

Poverty statistics also are shown for census tracts of 241 SMSA's and selected adjacent areas in **1970 Census of Population and Housing, Census Tracts, Series PHC(1)**. A description of poverty data contained in volume I and census tract reports can be found in Data Access Description No. 29, "Low-Income Data from the 1970 Census."

### 1960 Census

Statistics for low-income areas as defined by the use of 1960 census data are available for metropolitan

areas and their central cities in 1960 *Census of Population, Supplementary Reports, Series PC(S1)-54*, "Poverty Areas in the 100 Largest Metropolitan Areas." The definition of low-income areas based on 1960 census data differs from the definition used in this report. (See "Definitions.") The PC(S1)-54 report contains information on persons and families by age, race, family status, poverty status in 1959, and sex and age of family head. Census tract maps showing the delineation of these low-income areas were published by the Office of Economic Opportunity in a report entitled *Maps of Major Concentrations of Poverty in SMSA's of 250,000 or More Population*.

### Special Censuses

Two reports based on special censuses conducted by the Bureau of the Census during the 1960's provide survey data and comparable 1960 census data for what are essentially neighborhood subdivisions of the 1960 census low-income areas. *Current Population Reports, Series P-23, No. 18, "Characteristics of the South and East Los Angeles Areas: November 1965,"* presents social, economic, and housing data for seven neighborhoods in South Los Angeles and three neighborhoods in East Los Angeles. *Current Population Reports, Series P-23, No. 21, "Characteristics of Selected Neighborhoods in Cleveland, Ohio: April 1965,"* presents population characteristics for nine neighborhoods in Cleveland and for the balance of the city, with totals for the city as a whole.

### Current Population Survey

Data on the population are collected and published regularly by the Bureau of the Census through its *Current Population Survey (CPS)*, a nationwide survey covering a sample of about 47,000 households. Statistics from the March 1973 CPS for low-income areas based on the 1970 census definition are published in *Current Population Reports, Series P-60, No. 91, "Characteristics of the Low-Income Population: 1972."*

## DEFINITIONS

### Low-Income Areas

*1970 census definition.*—For this report, a low-income area consists of all census tracts in which 20

percent or more of all persons were below the poverty level in 1969. This method of defining low-income areas, which differs from other methods used in the past, was developed to provide a statistical index based on income only and to utilize the small-area data on poverty status which were available in 1970 for the first time in a decennial census.

To arrive at this definition, research was conducted by the Bureau's staff that would delineate for a given year low-income areas similar in size and location to those delineated by the 1960 census definition, which was based on an unweighted combination of five poverty-related socioeconomic characteristics. The researchers utilized a special tabulation of 1960 census data for census tracts in a sample of large metropolitan areas. Low-income areas defined by the 1960 census definition were chosen from this sample and were compared to low-income areas defined by aggregating all census tracts with poverty rates above selected cutoff values. This comparison showed that areas consisting of census tracts with poverty rates of 20 percent or more most closely approximated low-income areas defined by the 1960 method.

Although the majority of low-income areas selected by this definition are adjacent to each other, some represent scattered or isolated pockets of poverty. Tracts which contain fewer than 100 persons or which consist entirely of crews of vessels are excluded from low-income areas.

*Previous definitions.*—The 1960 definition of low-income areas was developed by the Bureau of the Census as part of its work for the Office of Economic Opportunity to identify areas of major concentrations of poverty within large metropolitan areas. This definition consisted of ranking census tracts in metropolitan areas with a 1960 population of 250,000 or more according to the relative presence of each of the following equally weighted poverty-linked characteristics: (1) Families with money incomes below \$3,000; (2) children under 18 years old not living with both parents; (3) persons 25 years and over with less than 8 years of school completed; (4) unskilled males (laborers and service workers) in the civilian labor force; and (5) housing units dilapidated or lacking some or all plumbing facilities. Those tracts falling in the lowest quartile of the ranking were defined as poor tracts and further adjusted for contiguity and minimum size in order to approximate neighborhood concentrations of poverty. For a detailed explanation of this definition, see *Current Population Reports, Series P-23, No. 19, "Characteristics of Families Residing in 'Poverty Areas': March 1966."*

These 1960 low-income areas were revised in 1969 to provide more up-to-date delineations of low-income areas in selected large cities. The revised areas were used as survey areas for the Census Employment Survey. This survey, in which detailed socioeconomic information on employment-related problems was collected in each of 60 urban and 7 rural areas, was conducted as part of the overall program of the 1970 census. Because of the timing of this project, 1970 census data could not be used to select the survey areas. Instead, changes were made to the 1960 low-income areas based on more recent information acquired from a wide variety of sources and corroborated by knowledgeable local experts. For further information on these CES areas, see 1970 Census of Population and Housing, Employment Profiles of Selected Low-Income Areas, Series PHC(3).

### Low-Income Neighborhoods

To provide a more detailed geographic breakdown of large central city low-income areas, these areas were further subdivided into "neighborhoods," which consisted of contiguous census tracts with a combined population of 20,000 or more. The neighborhood boundaries were based on currently available socioeconomic data and on recommendations from representatives of local groups such as community action, model cities, city planning, and welfare agencies. In some cases, it was necessary to combine neighborhoods to meet the minimum size requirement of 20,000.

ment of 20,000. A few exceptions to this minimum size requirement were made where it was deemed appropriate. It should be noted that detailed sample data become less reliable as the size of the neighborhood decreases.

In some cases, isolated tracts or groups of tracts could not be classified as a neighborhood and were included in a category called "remainder of low-income area." Data were tabulated for these "remainders" if they contained a population of 20,000 or more. Inspection of maps and tract listings is necessary to determine the usefulness of the data for these "remainders."

### Poverty Status in 1969

Families and unrelated individuals are classified as being above or below the poverty level using the poverty index adopted by a Federal Interagency Committee in 1969. This index provides a range of income cutoffs or "poverty thresholds" adjusted to take into account such factors as family size, sex and age of family head, number of children, and farm-nonfarm residence. The poverty cutoffs for farm families have been set at 85 percent of the nonfarm levels. These income cutoffs are updated every year to reflect the changes in the Consumer Price Index. The average poverty threshold for a nonfarm family of four was \$3,748 in 1969. (See table C.)

**Table C. Weighted Average Thresholds at the Low-Income Level in 1969 By Size of Family Unit, Farm-Nonfarm Residence, and Sex of Head**

(Figures in dollars. Based on 5-percent sample)

Size of family unit	Total	Nonfarm			Farm		
		Total	Male head	Female head	Total	Male head	Female head
All unrelated individuals....	1,844	1,849	1,931	1,795	1,570	1,615	1,517
Under 65 years.....	1,897	1,901	1,980	1,830	1,631	1,680	1,550
65 years and over.....	1,749	1,755	1,770	1,750	1,499	1,510	1,490

Source: 1970 Census of Population, Volume II, Subject Reports, Series PC(2)-9A, "Low-Income Population."

The low-income concept has been developed as a tool for measuring the overall economic well-being of the population at the lower end of the income scale. It is an attempt to identify in dollar terms a minimum level of income adequacy for families of different types in keeping with American consumption patterns. Based on an analysis of the percent of income devoted to food expenditures, an estimate was developed which specifies the minimum cost at which an American family, making average choices, can be provided with a diet meeting recommended nutritional goals. Consequently, it is an overall statistical yardstick which reflects the different consumption requirements of families of different size, taking into account family composition (number of adults and number of children) and farm-nonfarm residence. Insofar as individual circumstances or consumption patterns differ, the dollar value of the low-income threshold for a given family size may not represent the money income required by an individual family to maintain a level of economic well-being equivalent to other families with similar incomes. For a detailed explanation of the low-income concept, see appendix B in the volume I reports.

### Income in 1969

Income data collected in the census are limited to money income received before payments for personal income taxes and deductions for Social Security, union dues, Medicare, etc. Money income is the sum of the amounts received from earnings; Social Security and public assistance payments; dividends, interest, and rent; unemployment and workmen's compensation; government and private employee pensions; and other periodic income. (Certain money receipts such as capital gains are not included.) Therefore, money income does not reflect the fact that many families receive part of their income in the form of nonmoney transfers such as food stamps, health benefits, and subsidized housing; that many farm families receive nonmoney income in the form of rent-free housing and goods produced and consumed on the farm; or that nonmoney incomes also are received by some nonfarm residents which often take the form of the use of business transportation and facilities, full or partial payments by business for retirement programs, medical and educational expenses, etc. These elements should be considered when comparing income levels.

Since the reporting of income frequently is based on memory rather than on records, there is a tendency to underreport or fail to report some elements of income. Underreporting is especially pronounced for income sources that are not derived

from earnings, such as Social Security and public assistance payments, interest and dividends, etc. For example, in the Current Population Survey it has been determined that income earned from wages or salary tends to be much better reported than other sources of income and is nearly equal to independently derived benchmark estimates. By contrast, recent CPS income data on Social Security and public assistance payments to beneficiaries have averaged approximately 80 and 75 percent, respectively, of their benchmark estimates. In the census the under-reporting of these specified types of income and the number of recipients of such income compared with administrative records reflects, for the most part, the failure of some respondents to report them accurately, rather than the failure to enumerate persons receiving them.

### Race

Data are shown separately in each table for two racial categories, white and Negro. The category "white" includes persons who indicated their race as white, as well as persons who did not classify themselves in one of the specific race categories on the questionnaire but entered Mexican, Puerto Rican, or a response suggesting Indo-European stock. The category "Negro" includes persons who indicated their race as Negro or black, as well as persons who did not classify themselves in one of the specific race categories on the questionnaire but who had such entries as Jamaican, Trinidadian, West Indian, Haitian, and Ethiopian. The classification of families and households by race refers to the race of the family or household head.

Other races shown separately in table 1 are American Indian, Japanese, Chinese, and Filipino. The category "American Indian" includes persons who indicated their race as American Indian, as well as persons who did not indicate a specific race category but reported the name of an Indian tribe.

### Persons of Spanish Language

Persons of Spanish language comprise persons who reported Spanish as their mother tongue (i.e., the language usually spoken in the home when these persons were children) and also include all other persons in families in which the head or wife reported Spanish as his or her mother tongue. Persons of Spanish language may be of any race, although the large majority are white. Table 1 shows the distribution of persons of Spanish language by race.

## **Standard Metropolitan Statistical Areas**

Except in the New England States, a standard metropolitan statistical area (SMSA) is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more, or "twin cities" with a combined population of at least 50,000. In addition to the county or counties containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are socially and economically integrated with the central city. In the New England States, SMSA's consist of towns and cities instead of counties. Each SMSA must include at least one central city, and the complete title of an SMSA identifies the central city or cities. For a detailed description of the criteria used in defining SMSA's, see the Office of Management and Budget (formerly Bureau of the Budget) publication, *Standard Metropolitan Statistical Areas: 1967*, U.S. Government Printing Office, Washington, D.C. 20402.

## **Census Tracts**

Census tracts are small areas averaging about 4,000 residents into which large cities and adjacent areas have been divided for statistical purposes. Tract boundaries were established cooperatively by local committees and the Bureau of the Census with the intention of maintaining them over a long time so that comparisons could be made from census to census. Generally, tracts were designed to be relatively uniform with respect to population characteristics, economic status, and living conditions. For further information, see *1970 Census of Population and Housing, Census Tracts, Series PHC(1)*.

## **SAMPLE SIZE**

The data presented here are based on a 15-percent sample and are therefore subject to sampling variability. Definitions and technical explanations relating to the statistics in this report, as well as information on sampling variability, may be found in the volume II report, PC(2)-9B, "Low-Income Areas in Large Cities" or in the volume I reports.

Inmates of institutions, members of the Armed Forces living in barracks, college students living in dormitories, and unrelated individuals under 14 years old are excluded from the tabulations. Thus, the number of all persons shown for a given area will not equal the total population counts commonly cited from census reports.

## **DERIVED FIGURES AND SYMBOLS**

### **Derived Figures**

Percents, medians, and means, as well as certain rates and ratios, are used in this report. For all types of derived figures shown, the figure is not presented if the base is smaller than the minimum number (132) prescribed for the 15-percent sample. Instead, a symbol has been inserted.

### **Symbols**

A dash "--" signifies zero. Three dots "..." mean that the data are being withheld to avoid disclosure of information for individuals or households or that the base for the derived figure is too small for it to be shown. Any other symbols used are explained on the individual table in which they occur.
